

## **EMERGENCY PROCEDURES**

An inflatable unit can be a lot of fun when operated responsibly. As the lessee, you assume full responsibility for the safe use and operation of the inflatable unit. Please ensure proper safety precautions are followed at all times. The operation of an inflatable unit is relatively straightforward, but occasionally you might encounter a problem. If something goes wrong, try these suggestions to get your party back on track.

### LOSS OF POWER

If the inflatable unit should begin to deflate, don't panic! Help all participants to safely exit the inflatable. Stay calm. Once all participants have been successfully removed from the inflatable unit, follow the below steps:

- Ensure the blower is turned on and extension cord is plugged-in to a GFCI outlet.
- Check your fuse box or breaker box. If the breaker has been tripped, the circuit is overloaded. Unplug electrical devices on the same circuit and reset the circuit, or plug the inflatable unit into another GFCI outlet on a different circuit.
- Test the outlet with another electrical device. If other devices (i.e., a hair dryer) work on the outlet, it's possible the blower has been damaged. In this situation, call Bounce Party Supplies at 319-331-7062 and explain what has happened.

### RAIN

Do not attempt to use the inflatable unit in the event of rain. The surface of the unit can become slippery and create a potentially unsafe environment for participants. In the event of precipitation, help participants exit the inflatable, disconnect the blower and take it indoors, fold the inflatable unit in half and fold the tarp over the top.

### STRONG WINDS

Do not attempt to use the inflatable unit during winds in excess of 25 miles per hour. Strong winds can cause the unit to become unstable and create a potentially unsafe environment for participants. If at any time the wind starts to lift the inflatable off the ground, help participants safely exit the inflatable and deflate the unit. The inflatable until should not be used again until the wind has subsided.
